What To Know About
AG RISK MANAGEMENT
THREE COMPONENTS OF RISK

1. FREQUENCY: How often will the event happen?

2. SEVERITY: How bad is the event going to be?

3. COST: How much is this bad event going to hurt your farm or ranch?

It is not a matter of IF an event will happen, it is a matter of WHEN.

WHAT IS CROP INSURANCE?

Crop insurance is a Federally supported and regulated risk management tool that producers can purchase to protect against the loss of crops due to natural disasters such as hail, drought, flood, wind, fire, insects, disease, and wildlife, or the loss of revenue due to a decline in price.

HOW MUCH DOES IT COST?

The cost of crop insurance varies from each producer to the next. Producers can estimate premium and liability (guarantee) with the USDA Risk Management Agency's Cost Estimator Tool located on their website.
