

Plant Variety Record Log for Hawaii

(Draft, Hawaii Public Seed Initiative: Nov. 2011)

Name (of gardener or farmer):
Date:

Crop Background and Source Information

Species/crop name (eg tomato):
Variety or Cultivar Name:
Seed Source (company, or location in island eg Hanalei):
Date obtained (purchased or informally eg from seed exchange):
Variety Description:
Reported resistance (eg to disease/insect/nematodes/stress):
Growth habit (eg: indeterminate, large pods or heads):
Other particular notes/characteristics (eg adapted to winter planting):

Field Notes and Observations after Planting

Direct Seeding or transplanted:
Planting date:
Planting location:
Planting distance:
Plant stand (eg if 5 out of 10 plants become well established, plant stand = 50%):
Seedling Vigor Index, 2 weeks after planting (1-10; maximum vigor= 10):
Plant Vigor at mid-growth (eg 4-6 weeks after planting):
Pest Damage Index (1-10; maximum disease severity= 10):
Major pests/diseases, and parts of plant affected (eg lower canopy, upper canopy, roots):

Date of first flowering (30% of plants):
Date of first harvest:
Date of final crop harvest:
Date of seed harvest (if any):
General field and crop notes/general observations/recommendations:
